- Emphasizes process maturity, accountability, and continual improvement.
- Enables organizations to demonstrate their capability to manage IT services effectively.

Scope of ISO/IEC 20000

The standard covers a broad spectrum of ITSM processes, including:

- Service Delivery processes (e.g., Service Level Management, Incident Management)
- Relationship processes (e.g., Business Relationship Management)
- Resolution processes (e.g., Problem Management)
- Control processes (e.g., Change Management, Configuration Management)
- Release and Deployment Management

Organizations of all sizes—whether internal IT departments or external service providers—can adopt ISO/IEC 20000 to improve service quality and gain competitive advantage.

2. Conduct a Gap Analysis

- Assess current ITSM processes against ISO/IEC 20000 requirements.
- Identify gaps, weaknesses, and areas for improvement.
- Develop a plan to address identified gaps.

3. Establish a Project Team

- Form a cross-functional team with representatives from all relevant departments.
- Assign roles including project manager, process owners, auditors, and support staff.

4. Define Scope and Boundaries

- Decide which parts of the organization or services will be covered.
- Clearly document the scope to guide implementation efforts.

5. Develop or Update Processes

- Map existing processes and modify or create new ones to meet the standard.
- Focus on core processes like Incident Management, Change Management, and Service Level Management.
- Document procedures, workflows, and responsibilities.

6. Implement the Processes

- Roll out the new or revised processes across relevant teams.
- Conduct training sessions to ensure understanding and compliance.
- Use tools and technology to support process automation and monitoring.

7. Establish Documentation and Records

- Maintain comprehensive documentation, including policies, procedures, work instructions, and records.
- Ensure documentation is accessible, up-to-date, and controlled.

8. Conduct Internal Audits

- Regularly review processes to verify compliance and effectiveness.
- Identify non-conformities and areas for improvement.
- Record audit findings and implement corrective actions.

9. Management Review and Continual Improvement

- Senior management reviews performance metrics and audit results.
- Use feedback to refine processes and address deficiencies.
- Foster a culture of continual improvement aligned with PDCA (Plan-Do-Check-Act).

10. Certification Audit Preparation

- Select a reputable certification body accredited for ISO/IEC 20000 audits.
- Conduct pre-assessment audits to identify remaining gaps.

- Prepare documentation, staff, and processes for the official audit.

11. Certification Audit and Surveillance

- Undergo the initial certification audit, typically conducted in two stages:
- Stage 1: Review of documentation and readiness.
- Stage 2: On-site assessment of implementation.
- Address any non-conformities identified.
- Post-certification, undergo surveillance audits periodically to maintain accreditation.
