- Identifying suitable materials for specific applications based on properties like strength, durability, or aesthetics.
- Explaining how certain properties (e.g., malleability, thermal conductivity) affect the choice of material.
- Recognizing the advantages and disadvantages of materials such as aluminium, stainless steel, or acrylic.

Example from the 2013 paper:

?Describe two properties of plastics that make them suitable for use in products such as food packaging.?

This encourages students to think about properties like flexibility, chemical resistance, and transparency.

- Manufacturing Processes

Understanding how products are made is central to resistant materials studies.

Common topics include:

- Cutting, drilling, turning, and shaping techniques
- Joining methods: welding, screwing, gluing
- Surface finishing: polishing, plating, painting
- Using CAD/CAM technologies for production

Sample question:

?Explain how a CNC machine can be used to produce accurate components from metal.?

This tests knowledge of computer-controlled manufacturing and its benefits.

- Design and Evaluation

This section assesses students? ability to apply their knowledge creatively and critically.

Typical tasks include:

- Designing a product to meet specific criteria
- Justifying material choices based on function and aesthetics
- Evaluating existing products for improvements

Sample question:

?A school wants to design a new storage box made from resistant materials. Outline the factors you would consider in your design process.?

This encourages consideration of user needs, safety, cost, and environmental impact.

Deep Dive into the June 2013 Question Paper

Analyzing the specific questions from the June 2013 paper reveals trends and key focus areas.

Question 1: Material Identification and Properties

The initial questions often focus on basic recall, such as identifying suitable materials for certain uses and explaining why.

For example:

"Identify a suitable material for making a lightweight bicycle frame. Justify your choice."

Expected answers might include aluminium or carbon fibre, emphasizing their strength-to-weight ratio.

Question 2: Manufacturing Techniques
